Problem Statement

Group Members: Sarahy Simental, Denesse Sosa

Problem Statement:

While software that creates knit patterns does exist, there are none that create complex patterns.

Who is experiencing the problem?

Knitters, who wished to create their own pattern. Be it beginner, intermediate, or advanced.

What is the problem?

The problem is that knitters may want to create a unique piece, catered towards their liking. But, with so many techniques, it's difficult to design a knit pattern easily.

Where does the problem present itself?

Whenever a knitter wants to create a personalized piece, like a new sweater.
